

Help Put the Animals Back in their Environment

INSTRUCTIONS:

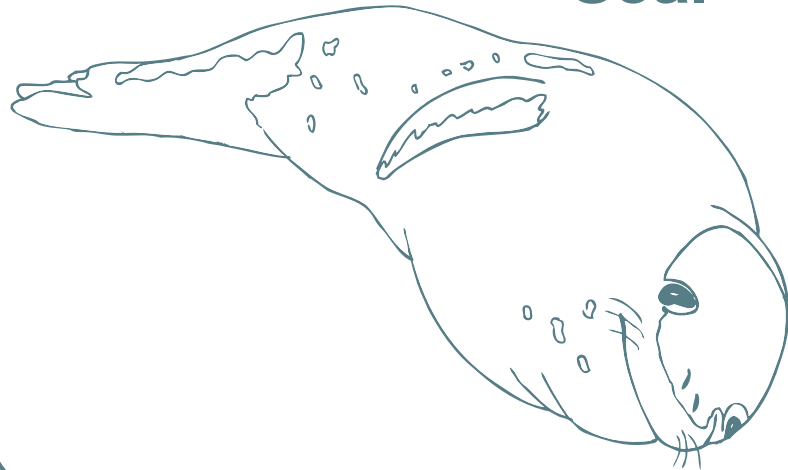

1. To complete this project you will need something to color with, scissors, and glue or tape.
2. Cut along the dotted line.
3. Color in the animals.
4. Carefully cut them out.
5. Glue or tape them onto the ice sheet.

The earth has warmed at a high rate of 6.67°F every 10 years for the past 30 years, which is a very high rate. Earth is now with in 33.8°F of its highest temperature in the past million years. These high temperatures have caused the ice sheets to start melting. Because of this many animals are having trouble finding food and places to live. If this melting continues these animals and many more will be at risk of not surviving.

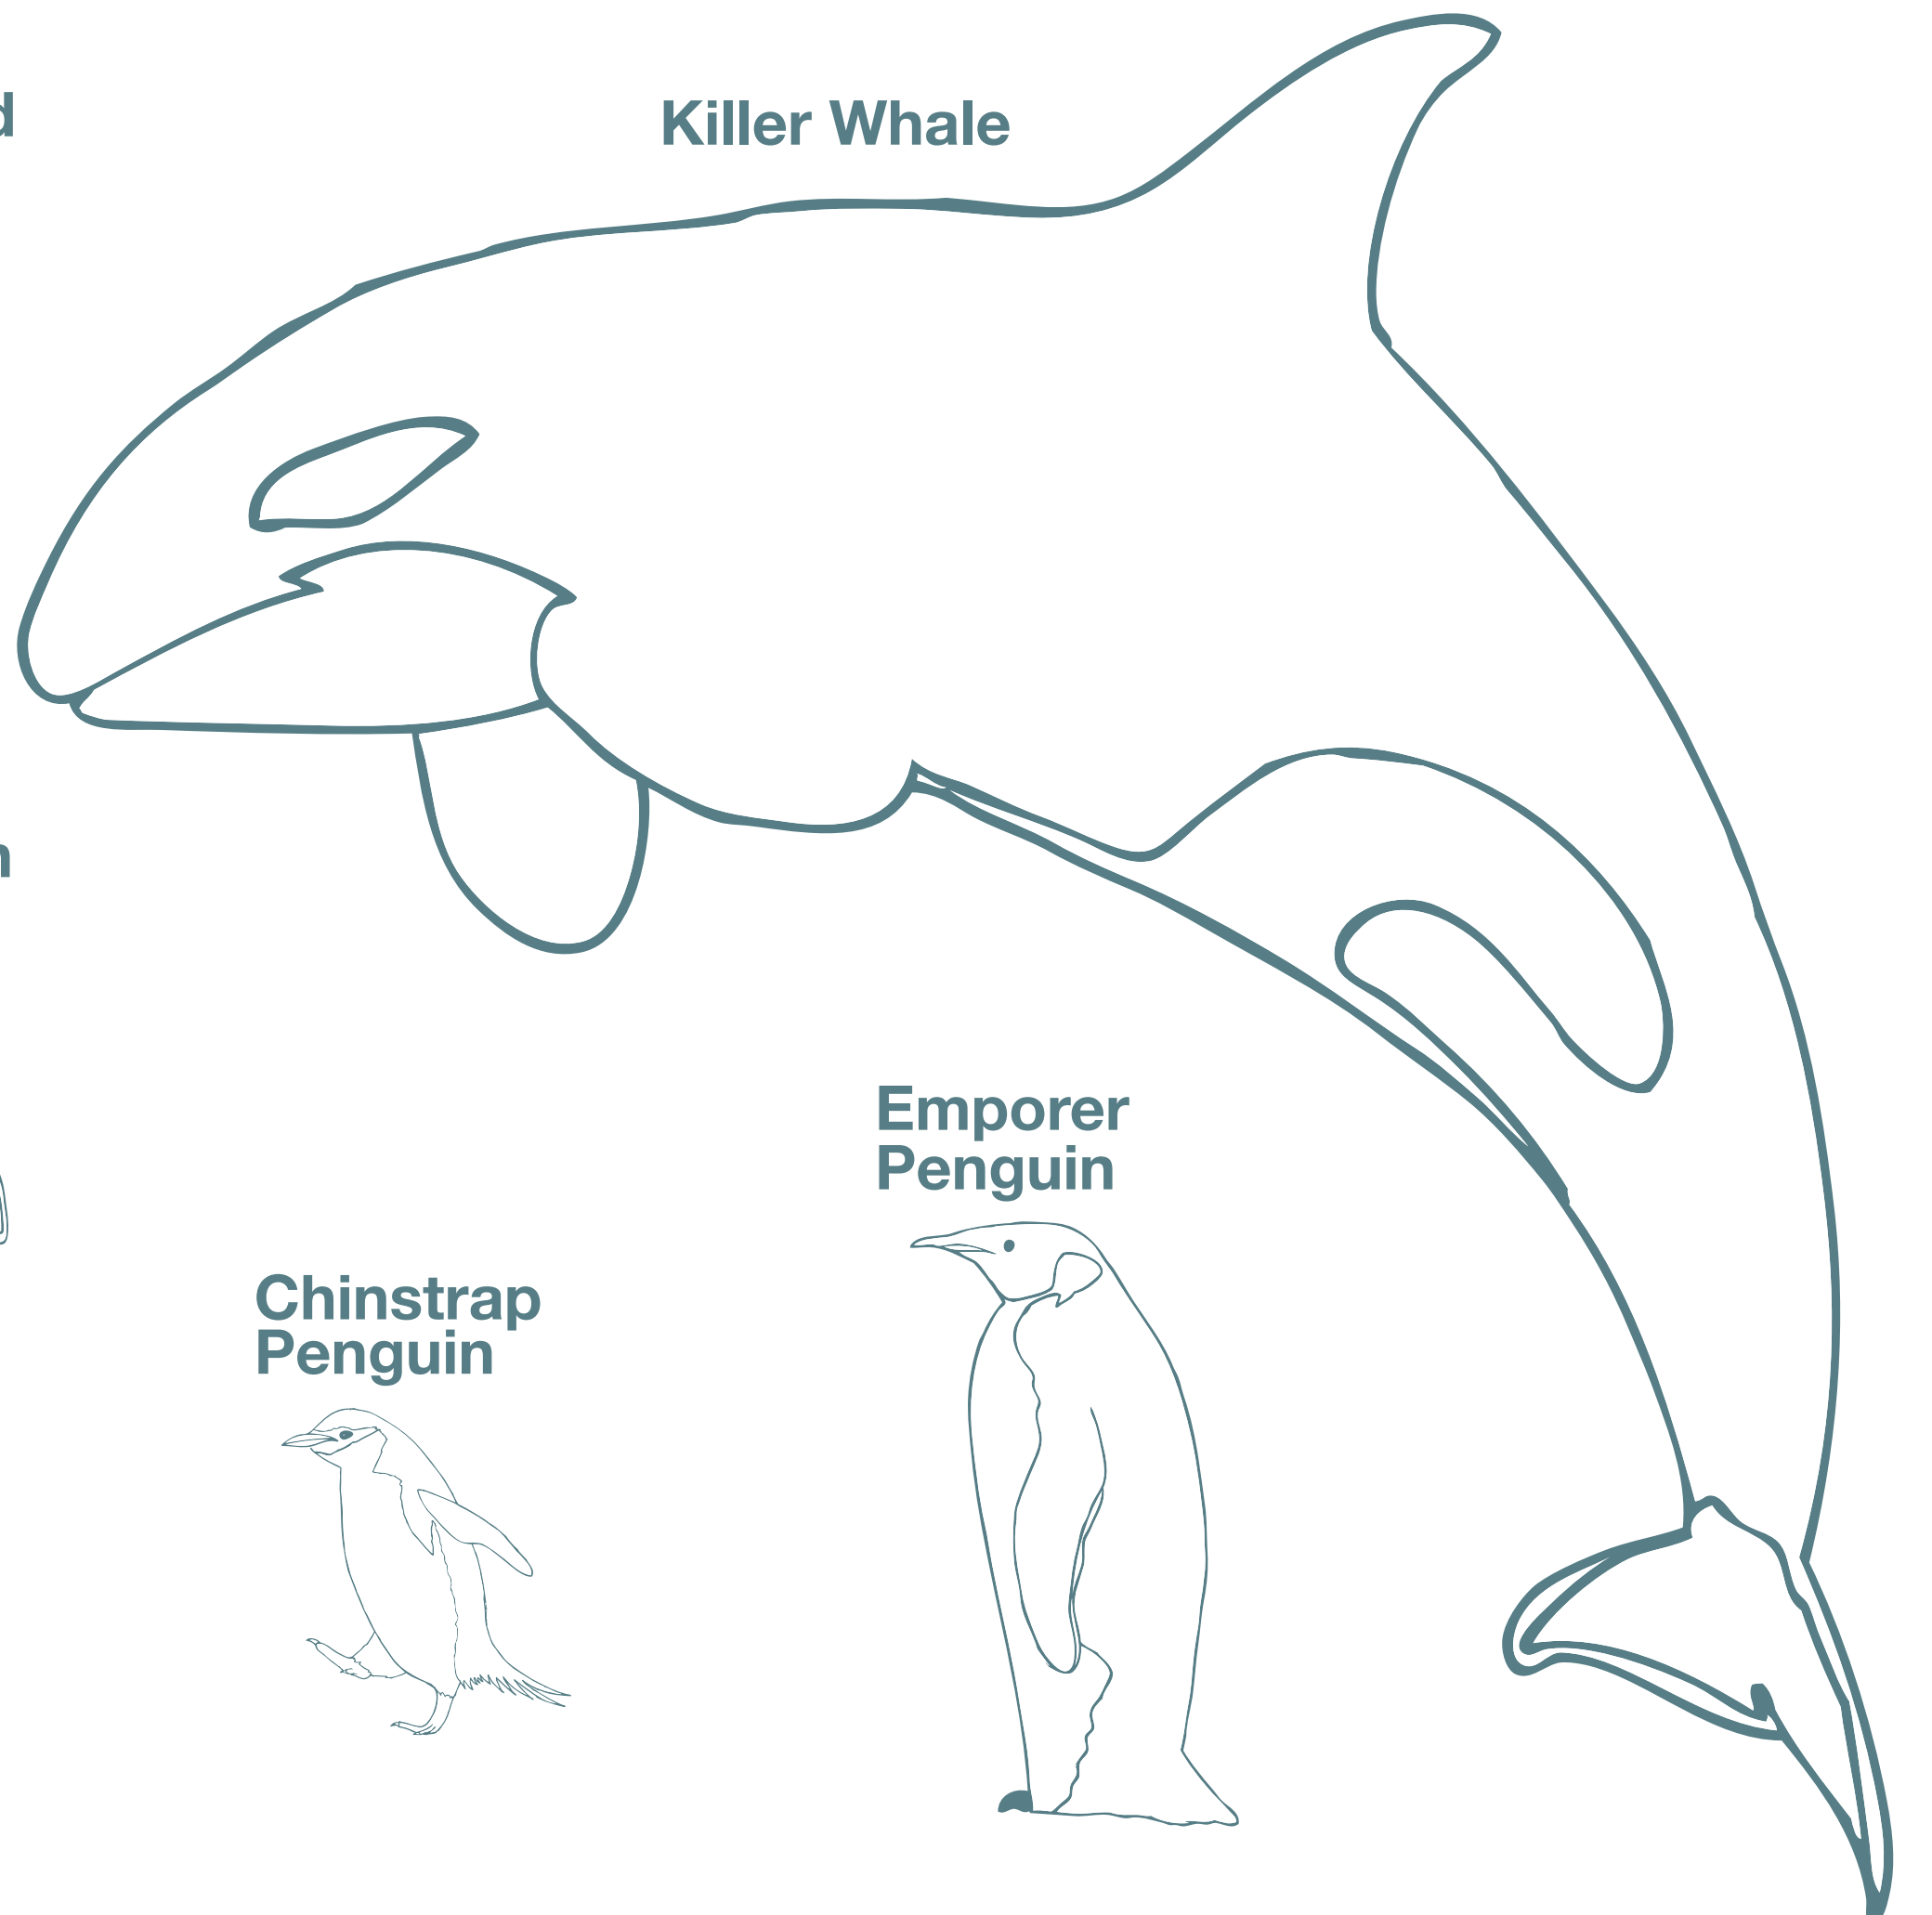

Polar Bear

Leopard Seal

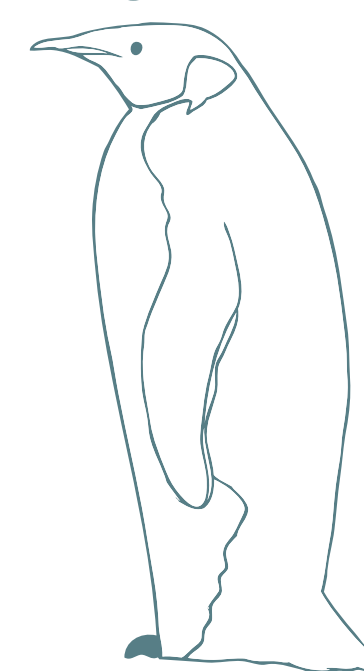

Killer Whale

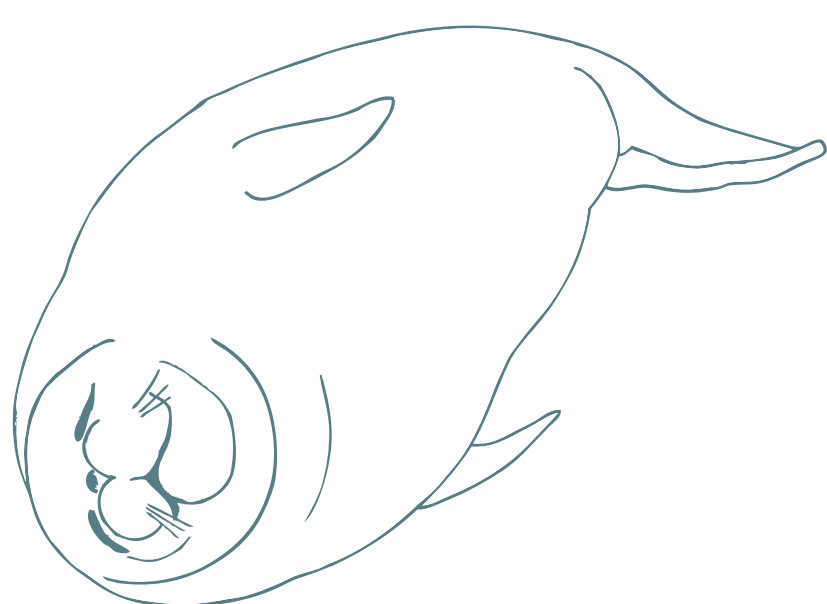

Adelle Penguin

Emporer Penguin

Weddell Seal

Chinstrap Penguin

Krill
